

Descriptifon : Baby Sleep Tracker

Plateforme : iOS

Here is the ideal application for following your baby's sleep patterns and evaluating the evolution and quality of its sleep.

How does it work?

It's incredible! Press "activate" and leave your machine next to your baby's bed. The application will do all the rest! The application is completely automated and archives your baby's sleeping time, detects and records when it is crying, and shows the evolution of its sleep on a graph.

Functions

- Clear and simple to use
- Recordings started by sound detection
- Adjustable sound sensitivity
- Adjustable recording settings
- Graph analysis of sleep
- Statistics about time sleeping
- Sharing by email
- Downloading on iTunes
- Personalising the profile

Good night and sweet dreams for your baby:-)

This Application is reserved for your personal use. Please note that it is forbidden to record and distribute recordings without the consent of the people concerned.

Warning: Please do not forget to activate Airplane mode of your machine to block the appeals and waves sent. Note that you are not advised to leave your device in your baby's bed; it is safer to place it on a nearby table.
